

AYOUB JANINA

Senior Software Developer | Data & Software Engineering Student

+212 645 532 991 | @ayoubjanina2015@gmail.com | ayoxic.vercel.app | Rabat / Casablanca, Morocco

KEY ACHIEVEMENTS

Organizer, INSEA "Game of Codes" event

Contributed to organizing a programming and problem-solving event for students, supporting a collaborative coding community at INSEA.

Multidisciplinary Technical Portfolio

Built practical experience across full-stack development, databases, mobile applications, computer vision, and data analytics while pursuing engineering studies.

LANGUAGES

Arabic	Native	●●●●●
French	Proficient	●●●●●
English	Proficient	●●●●●
Spanish	Beginner	●●●●●

SKILLS

Programming Languages

Python	PHP	JavaScript
TypeScript	Python	Java
SQL		
HTML5	CSS3	

Backend & APIs

Laravel	REST APIs
Authentication & Authorization	
API Integration	Postman

Frameworks & Web Development

Responsive web design		Laravel
React	Next.js	React Native
Node.js	Tailwind CSS	
MVC Architecture		Eloquent ORM

Databases & Data Management

MySQL	PostgreSQL	Firebase
ETL Pipelines	dbt	BigQuery

SUMMARY

Results-driven Data and Software Engineering student at INSEA with practical experience designing and delivering full-stack web applications, secure backend services, database-driven platforms, mobile applications, and AI-powered analytics solutions. Proficient in PHP, Laravel, JavaScript, Python, SQL, MySQL, PostgreSQL, React, Next.js, TypeScript, Docker, Git, Linux, Firebase, REST APIs, CI/CD fundamentals, and cloud-oriented development practices. Strong in building scalable application architectures, authentication and authorization systems, API integrations, relational database models, automated testing, secure coding, and responsive user interfaces. Combines solid software engineering principles with hands-on project delivery in computer vision, data analytics, and real-time applications, and is ready to contribute to a full-time junior software engineering, backend, or full-stack development role.

EXPERIENCE

Software Developer

EasyPsi

2026 | Casablanca, Morocco

- Built a multilingual learning platform in three languages with support for four academic levels and structured lesson delivery across courses, quizzes, and exercises.
- Implemented a complete premium system with two access tiers, subscription duration management, payment redirection, and protected educational content.
- Created an admin dashboard to manage students, videos, supports, quizzes, and account access from one centralized interface.
- Redesigned the user experience across the platform, including the homepage, navigation, progress tracking, email verification, and responsive student flows.

EDUCATION

Data and Software Engineering | First-Year Student

Institut National de Statistique et d'Economie Appliquée (INSEA), Rabat

2025 - Present | Rabat, Morocco

Two-year intensive Mathematics and Physics preparatory program

Classes Préparatoires aux Grandes Ecoles - MP | Lycée Mohammed V, Casablanca

2023 - 2025 | Casablanca, Morocco

Baccalaureat Sciences Mathématiques A

Lycée Tarik Ibn Ziad | Casablanca

2022 - 2023 | Casablanca, Morocco

Average
16 / 20

PROJECTS

Educational Learning Platform

Paid Client Project | Laravel, PHP, MySQL, JavaScript, HTML/CSS

- Designed the functional structure of an educational platform with course categories, student accounts, protected learning areas, and premium access planning.
- Planned Laravel backend features covering authentication, validation, database relationships, CRUD management, and admin workflows for courses, lessons, students, and subscriptions.
- Built responsive user flows for course discovery and structured learning content while applying secure development practices such as input validation, CSRF protection, and access control logic.

Football Player Chemistry Analysis System

Python, YOLOv8, OpenCV, Streamlit, Data Analysis

- Developed a Python video analytics pipeline using YOLOv8 and OpenCV to detect players and the ball from football match footage.
- Implemented tracking and positioning logic to analyze movement, proximity, possession, and pass-related interactions between players.
- Generated chemistry tables, player heatmaps, pass-network visualizations, and a Streamlit dashboard using hybrid chemistry scoring models.

SKILLS

AI, Data & Analytics

PROJECTS

GPS Treasure Hunt Mobile Application

React Native, JavaScript, Firebase, Geolocation, Realtime Database

- Developed a location-based mobile game that unlocks missions when users reach real-world destinations
- Implemented Haversine-based distance calculations, sequential mission unlocking, and time-sensitive countdown challenges to structure gameplay
- Integrated Firebase anonymous authentication, Realtime Database sync, and local storage persistence to preserve progress across sessions

INSEA Institutional Website

PHP, MySQL, HTML, CSS, JavaScript

- Created a bilingual institutional website concept with French and Arabic content for academic programs, partnerships, and student life
- Designed an academic information model covering programs, levels, semesters, periods, modules, and subjects
- Built responsive PHP pages with MySQL-backed authentication and database connectivity to organize institutional information

CERTIFICATIONS

Data Engineer Associate

DataCamp

Database Programming with SQL
